

DUSAN PUDAR

WEB / FRONTEND DEVELOPER

Belgrade, Serbia | dusan@pudar.me | +381654316019 | [LinkedIn](#)

SUMMARY

Dedicated Web / Frontend Developer with hands-on experience building multilingual, production-ready web platforms using PHP, JavaScript, HTML, CSS, WordPress, and other web technologies, including large-scale work in the iGaming industry. A reliable team player who takes ownership of projects end-to-end and consistently delivers on time. Eager to keep learning and expand into new tools and technologies as needed. Currently completing a Master's in Computer Engineering, building on a Bachelor's in the same field.

TECHNICAL SKILLS

- | | | | |
|--------------|--------------------------|-------------------------------|----------------|
| • PHP | • WordPress | • Responsive Web Design | • Git / GitLab |
| • JavaScript | • Advanced Custom Fields | • Cross-Browser Testing | • CI/CD |
| • jQuery | • CMS | • UI Implementation | • Jira |
| • HTML5 | • Elementor | • SEO Optimization | • Confluence |
| • CSS3 | • Bootstrap | • Debugging & Troubleshooting | • SQL / MySQL |

PROFESSIONAL EXPERIENCE

Junior Web Developer, Sportserve (Sportion)

Belgrade, Jun 2025 to Sept 2026

- Wrote clean, efficient, well-documented code in PHP and JavaScript, alongside HTML and CSS, ensuring cross-browser compatibility and responsive design across all projects.
- Converted PSD designs into responsive, pixel-perfect HTML and built out corresponding front-end functionality.
- Built and maintained landing pages, satellite pages, and promotional campaigns, including a shared header/footer template system used across 300+ pages.
- Developed WordPress sites from scratch using Advanced Custom Fields (ACF), as well as custom websites and microsites based on client technical and functional specifications.
- Created and managed promotional banners using Bannerflow.
- Resolved 200+ support and development tickets to date, consistently delivering on time and maintaining a high standard of quality.
- Collaborated closely with the team on creative and technical problem-solving.

Junior Web Developer Trainee, Sportserve (Sportion)

Belgrade, Mar 2025 to Jun 2025

Completed a 3-month onboarding period, building trainee/practice websites to develop core front-end and WordPress skills before moving into full client project work as a Junior Web Developer.

Junior Web Developer, Kliker IT Centar za decu

Belgrade, Aug 2024 to Mar 2025

- Built and maintained WordPress websites for the franchise's regional presence, including new language versions for Montenegrin, Bosnian, Slovenian, and Macedonian markets, alongside ongoing maintenance of the Serbian site.
- Designed and implemented Make (Integromat) automations to handle online course applications end-to-end.
- Built an admin dashboard for staff with automated certificate/diploma generation.
- Created marketing campaigns in Canva and supported promotion across social media and web channels.

Intern Junior Frontend Developer, Contrimo GmbH

Belgrade, Oct 2023 to Jan 2024

- Contributed to the development of a web application using HTML, CSS, JavaScript, and the KnockoutJS library, working within an established enterprise codebase.
- Implemented and maintained UI components, translating design requirements into functional, data-bound frontend views.
- Collaborated with senior developers to understand and follow existing architecture and coding conventions within a 3-month internship period.
- Gained hands-on experience with component-based frontend development in a professional, production-oriented environment.

Freelance Graphic Web Designer and Web Developer, Godzilla Design Bileca, BiH, May 2019 to Sept 2021

- Independently designed and developed websites and digital solutions from concept through final implementation.
- Created website layouts, designed visual assets, and performed photo manipulation for client projects.
- Built custom websites based on individual project requirements, managing each project independently from planning to delivery.
- Gained hands-on experience with frontend technologies, content management systems, and client-oriented solutions.

KEY PROJECTS

Celtic FC Prediction Challenge — Dafabet

Owned a weekly promotional campaign end-to-end throughout an entire football season. Redesigned the campaign architecture from 44 to ~19 files per release by building a reusable template system with centralized translations (PHP), cutting duplication and turnaround time on every weekly release. Engineered a CI/CD deployment pipeline with cache-busting so banner updates reached users reliably, week after week, with zero manual intervention.

Technologies: PHP, JavaScript, jQuery, CSS3, HTML5, CMS, CI/CD, GitLab

Shared Header/Footer Template System — Dafabet

Designed and built a centralized header/footer template now powering 300+ live Dafabet landing pages, eliminating the need to edit each page individually. Engineered a timestamp-based versioning system for sponsor/partner logos across desktop, mobile, and tablet variants per language, and integrated the template with GitLab so a single commit deploys updated assets instantly across the entire page network — turning what used to be a page-by-page task into a one-step operation.

Technologies: PHP, JavaScript, jQuery, CSS3, HTML5, CI/CD, GitLab, Jira, Bannerflow, Confluence

DAFAMILLION Cup 2026 Prediction Game — Dafabet

Built an interactive, multi-language World Cup 2026 prediction game from the ground up. Engineered a multi-stage drag-and-drop prediction flow spanning Group Stages through Round of 32, Round of 16, Quarter-Finals, Semi-Finals, and the Final, backed by a live countdown timer and a CMS-connected entry submission system handling user registrations in real time.

Technologies: PHP, JavaScript, jQuery, CSS3, HTML5, CMS, CI/CD, GitLab, Jira

NBA Playoffs Bracket Championship — Dafabet

Built an interactive, bracket-style prediction game letting users forecast series outcomes from Round 1 through the Conference Finals to the NBA Finals. Developed the multi-language template/translation system, a live countdown timer, and per-matchup score-picker interactions, all backed by a CMS-connected entry submission pipeline.

Technologies: PHP, JavaScript, jQuery, CSS3, HTML5, CI/CD, CMS, GitLab, Jira

EDUCATION

Master of Applied Science (MASC), The School of Electrical and Computer Engineering of Applied Studies, Belgrade

Oct 2024 to Present

Currently pursuing a Master's degree in Computer Engineering, focusing on software development, information systems, and modern data technologies. Developing a master's thesis focused on the design and implementation of a Big Data system for collecting, storing, and visualizing sports data, with emphasis on data processing, system architecture, and information management.

Bachelor of Applied Science (BASC), The School of Electrical and Computer Engineering of Applied Studies, Belgrade

Oct 2021 to Oct 2024

Focused on software development and modern web technologies, gaining practical experience in programming, web application development, databases, and information systems. Developed knowledge of frontend technologies, software engineering concepts, and the principles of building reliable, user-focused digital solutions.

High School, SSC Golub Kures, Bileca, BiH

Sept 2017 to Jun 2021
